architectural aluminium systems

REIDglazing

REIDsteel and **REIDglazing** are trading names of John Reid & Sons (Strucsteel) Ltd
Company Registration No: 617773

REIDsteel is a structural steel engineering company which has been manufacturing and erecting large commercial buildings, aircraft hangars, grandstands, bridges, process plants, car parks and many other structures worldwide for over 90 years. The key to our success is that we design, manufacture and erect all the elements of our buildings: from the steel structure, the roof, the cladding, to the windows and doors.

The **REIDglazing** division design, manufacture and install architectural glazing elements including windows, doors, curtain walling, atriums, louvres and solar shading (brise soleil). We can provide a wide range of high quality bespoke products tailored to the individual requirements of the client, main contractor and architect on each project, whether in a commercial or domestic application worldwide.

We have a dedicated and experienced fitting team who are fully qualified with all relevant certification. Excellent Health and Safety practices are maintained on site at all times.

All our products conform to the latest building regulations.

The following pages showcase some of our products from previous projects and all of the buildings were structurally designed, made and erected by *REIDsteel*.

Architectural Specification

Aluminium sections are extruded from aluminium alloy 6060T6, T5 or T4 complying with the recommendations of BS EN 12020-2: 2001 / BS EN 755-9: 2001.

Powder coating is applied to BS6496 using Syntha Pulvin or Interpon powder with guarantees up to 30 years (dependant on location and site conditions). Colours can be chosen from our standard RAL or BS range and metallic or special colours are available upon request.

Glass can be provided in a wide range of different combinations either single or double glazed. Antisun glass is available in bronze, grey, green or blue tints. Low E glass is usually supplied to meet the required U Values and there are options of hard or soft coatings available. Argon gas is used to fill the cavities on double glazed units as standard. Toughened or laminated safety glass is used in critical locations for the requirement of BS 6262.

All double glazed units are manufactured to BS EN 1279.

Toughened safety glass is manufactured to BS EN 12600:2002.

We have a wide range of different hardware options for all of our products including hinges, handles, trickle ventilators, door closers and thresholds. Data sheets can be provided upon request.

Single Swing Door

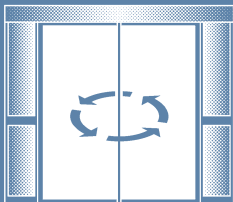

Double Swing Door

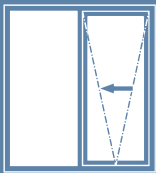

Shopfront Screens with Manual or Automatic Swing Doors

Shopfront Screens with Manual or Automatic Sliding Doors

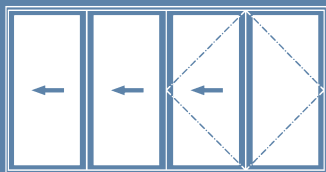

Revolving Doors

Tilt & Slide Patio Door

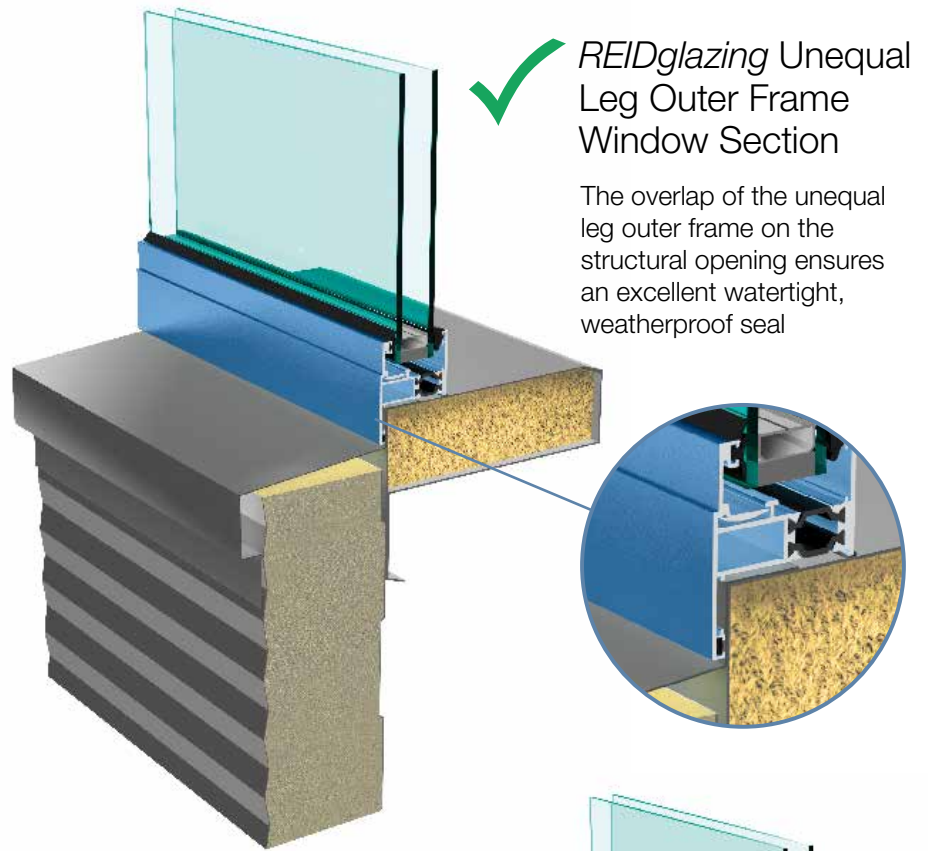

Louvred Door

Bi-Folding / Stacking Doors

When fixing our windows into clad openings we use an unequal leg outer frame around the perimeter wherever possible. This gives an excellent watertight and weatherproof seal in comparison to an equal leg outer frame because it is not solely reliant on a silicone seal. All our aluminium windows have polyamide thermal breaks to prevent the thermal transfer between the outside and inside of a building.

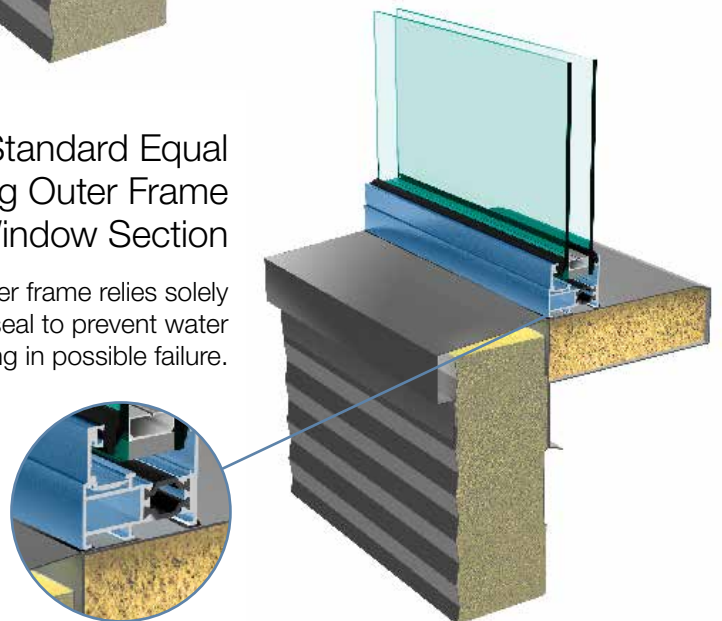

REIDglazing Unequal Leg Outer Frame Window Section

The overlap of the unequal leg outer frame on the structural opening ensures an excellent watertight, weatherproof seal

Standard Equal Leg Outer Frame Window Section

Equal leg outer frame relies solely on the silicone seal to prevent water ingress resulting in possible failure.
